GINGIPROTECT

**Effective preservation
of the gingival
margin**

I AM ACCURATE

GINGIPROTECT

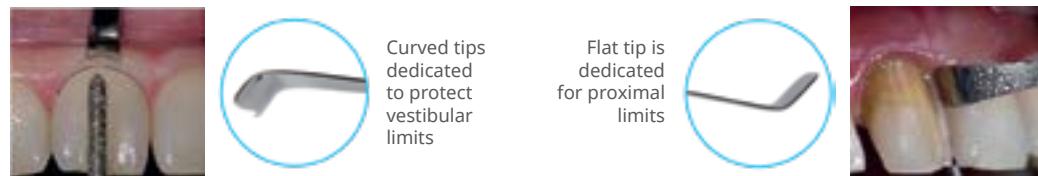

“ Effective protection of the marginal gum is a major imperative in esthetic restorations. Once tried, the gingival retractor GingiProtect® becomes as essential as the periodontal probe. ”

Dr Jean-François LASSERRE (Bordeaux, France)

Stay confident during subgingival access :

- ▶ Manage preparation of the juxta or intra-sulcular cervical limits
- ▶ Effortless access to bonding of ceramic adhesive restorations to finely polish the adhesive gap
- ▶ Keep the gingival retraction cord away from the rotating bur
- ▶ Identify a rack/root fracture
- ▶ Remove the residual bonding cement on prosthetic abutments
- ▶ Push down the rubber dam when inserting and bonding prosthetics
- ▶ Easier placement of composite on Class V caries: no bleeding occurs when preparing, bonding and polishing

ESTHETIC RESTORATIONS: GINGIPROTECT® IS A VALUABLE INSTRUMENT TO PROTECT THE GINGIVAL MARGIN
